2020/07/01 - 2020/09/31
New NOAA-NIDIS Coping with Drought project

Drought Indicators to Support Drought Impact Mitigation for Natural Resource Management

“to address how science and information systems can better prepare communities to mitigate drought impacts [...]"

The ultimate goal is to improve the ability of drought managers [...] to mitigate drought impacts through timely action based on relevant information.”
New NOAA-NIDIS Coping with Drought project

Drought Indicators to Support Drought Impact Mitigation for Natural Resource Management

“As part of this project, we are seeking to engage members of recreation and natural resource sectors to understand drought impacts they experience, strategies for coping with drought, indicators of drought they use to make decisions, and the timeline for making these decisions.”
New NOAA-NIDIS Coping with Drought project

Drought Indicators to Support Drought Impact Mitigation for Natural Resource Management

Specifically, we are looking for input on three items:

1. Impact datasets
2. Drought indicators currently used
3. Interest in being part of a stakeholder group
